Collaboration matrix

Map which organizations in your ecosystem would like to collaborate on which topics, and who to bring together.

1
Across the top, write the topics your ecosystem could collaborate on.

2
Down the side, list the organizations taking part.

3
Ask each organization to mark the topics it is most interested, able and willing to collaborate on.

4
Count the marks in each column: the organizations that share a topic are a group to bring together, in a facilitated discussion, to identify potential projects.
